Projects

Deepfake Detection System | Python | [Link](#)

2024 – 2025

- Developed a CNN-based model using Python, OpenCV, and Keras achieving 92% accuracy.
- Implemented frame extraction and feature engineering for model training.
- Applied dataset balancing techniques to improve model performance.
- Evaluated results using accuracy metrics and validation strategies.

Student Records Management System | SQL, Bootstrap, APIs

2024

- Designed and implemented a relational database system using SQL.
- Developed CRUD functionalities with role-based access control.

Salary Prediction System | HTML, CSS, JavaScript, Flask

2024

- Built a regression model using machine learning techniques.
- Integrated the model into a Flask-based web application for predictions.

Awards & Certifications

- Python for Data Science - IBM
- Cybersecurity – Cisco Networking Academy
- SQL Certification – Infosys Springboard
